

Straight Talk from 3D CAD Users

Hear what designers are saying about Pro/ENGINEER®

DID YOU KNOW

"Pro/ENGINEER offers advanced functionality at a surprisingly low price."

Seo Min Jun works as Engineering Manager at WATOS COREA Co. Ltd., a Korean manufacturer specializing in the development of environmentally friendly bathroom products, such as water-saving toilets, wash basins, bidets and faucets. He previously used 3D CAD products such as Unigraphics® and Autodesk Inventor®, but since WATOS moved to 3D design in 2007, he has been working with Pro/ENGINEER on a daily basis.

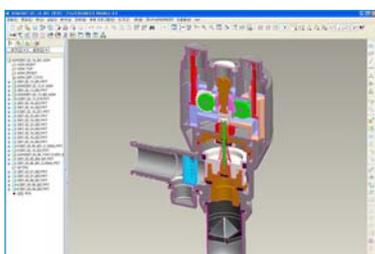

"I had already used Pro/ENGINEER when attending university, so I was familiar with the software. Since the [Pro/ENGINEER] software interface has been improved with every new release in recent years, I found it very easy to pick it up again. Instead of taking any training, I could fully focus on optimizing our new product design workflows."

Seo Min Jun, Manager
WATOS COREA Co. Ltd.
Incheon, Korea

Established in 1978, WATOS COREA specializes in the development and manufacturing of bathroom products, such as faucets, toilet seats, basins, and bidets.

All WATOS products are designed in Pro/ENGINEER.

Why Pro/ENGINEER is So Effective

"The surfacing capabilities in Pro/ENGINEER are very strong, yet easy to use and play an important role for us. The software allows us to create more competitive designs in a shorter time, thus securing us an excellent position in the market.

Also, we were able to drastically reduce error rates. When doing 2D drawings, errors occurred rather frequently. However, with Pro/ENGINEER and its associativity, we have been able to avoid them entirely by easily validating the fits of parts in our assemblies.

On top of this, we have gotten access to the simulation tools. For example, we can conveniently do interference checking on moving parts without leaving the application. In summary, choosing Pro/ENGINEER for our 3D design solution was definitely the right choice."
